

FOOTWEAR SECTOR CONCENTROL

LEADERS IN THE INVISIBLE

CONCENTROL FOAM RELEASE AGENTS

Parameters for choosing the right release agent: Types:

- Mould temperature
- Type of polyol used: polyester or polyether
- The finish of the sole of the shoe: matt, glossy or satin
- Concentration and active material
- Paintability/Adherence between layers of paint and others

For:

- Monodensity soles and shoes (rear-mounted and direct injection)
- Bidensity soles and shoes (rear-mounted and direct injection)

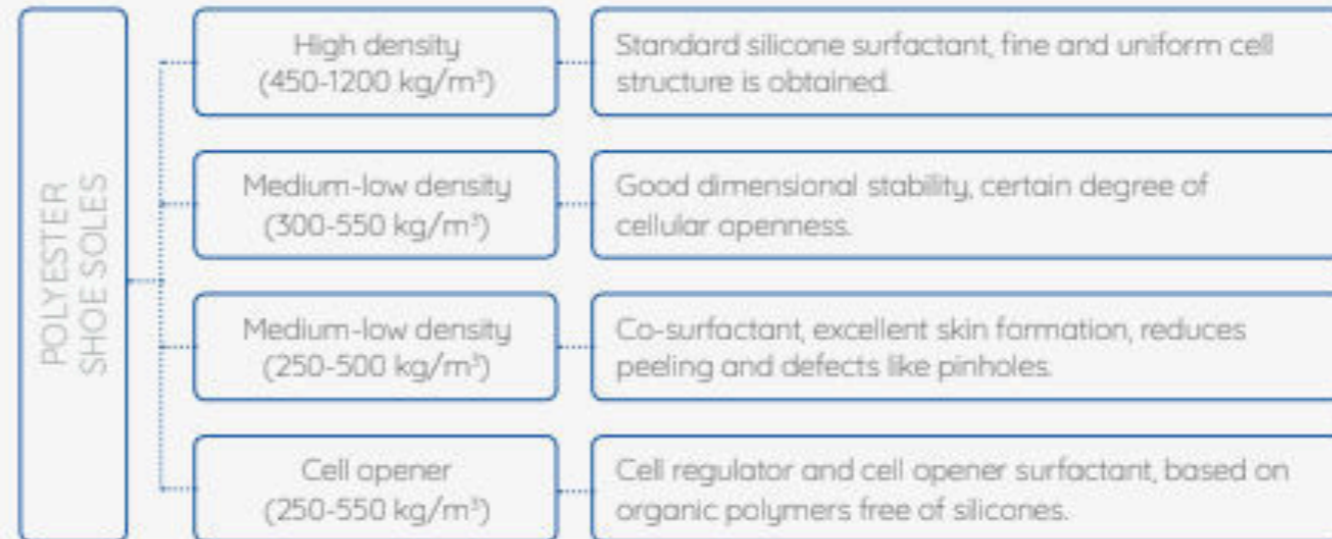

Sustainable solutions:

STABILIZERS FOR POLYURETHANE FOAMS

The CONCENTROL STB PU range improves the emulsification of the components of the system, offering enough stabilization in the foam expansion process and optimal cell opening, besides control of the size and distribution of the cells. Meets the requirements of foam manufacturers.

MOULD CLEANERS

Our range of cleaners enable moulds to be cleaned easily after long work cycles.

AUXILIARY PRODUCTS

• ADHESIVES

Concentrol offers **WATER BASED ADHESIVES** (the range TACKTROL®), **HOTMELT ADHESIVES** (the range PROMELT® and NETMELT®) and polyurethane based **REACTIVE HOTMELT ADHESIVES** (PROMELT PUR®).

We should give special mention to our range of water based contact adhesives TACKTROL CCA, indicated for gluing all types of textiles and leather in pre-sewing operations - for gluing interior lining, heel supports etc. They can be applied by spraying, roller or brush.
