AIR FILTERS AND ARMRESTS, A STRATEGIC SECTOR FOR CONCENTROL

Concentrol has conducted a market study focused on car filters and armrests made from integral polyurethane foam.

Different types of **filters** are used inside the vehicles, based on polyurethane foam:

- **Air filters**
- **Fuel filters**
- **Cabin air filters**

The central **armrests** in cars are made of a part of flexible PU foam and are later covered with fabrics, synthetic fabric or leather.

Types of release agents

Most manufacturers use solvent-based release agents. The **product lines offered by Concentrol** are:

- CONCENTROL SI-345 FM
- CONCENTROL NL-2-2714
- CONCENTROL SI-345 CN-215
- CONCENTROL SI-345 CN-3
- CONCENTROL SI-345 WX
- CONCENTROL LP IA-114-10
- CONCENTROL LP IADC-114-57 ESB

Concentrol also has the product CONCENTROL CLEANER LML-1200, a product designed to remove the remains of release agents in moulds
